- Indian Grass
- Little Bluestem
- Sideoats Grama

What can't the Woods Seeder plant?

- Lima Beans

WOODS
Woods Equipment Company

* Cool Season Grass and Cereal Grains Box is standard on all Precision Super Seeders.

Advantages of the Woods PSS Calibration System

Tired of messing with tarps and brooms or bags tied to seed cup assemblies? Seed consistently and accurately every time with the Woods Precision Super Seeder (PSS) calibration system. While seeding charts are a helpful reference, you need a more precise system to make the most of your seed and your time. With the Woods PSS you can simulate planting, even while the seeder is stationary, removing the waste and guesswork in one quick, easy process.

1. Pull calibration tray from its storage position and place into the collection slot.
2. Pour seed into the two right-most seed cups.
3. Operate the seeder for a specified distance. Or, for stationary calibration, disconnect the seed shaft from the chain drive and rotate seed meters using the optional crank or a 12-point socket.
4. Weigh the collected seed.
5. Use the formula on the seed box decal to determine your seed rate.

No mess... no waste... no guessing.

Additional chain drive kits are available for certain applications requiring slower seeding rates. For more details, refer to the Precision Super Seeder product manual or to find your local Woods dealer call 800-319-6637.
